

Dear 6th grade parents,

Vaccine requirements for 7th graders

The state of Ohio requires all students entering the 7th grade to have the meningococcal vaccine (also known as MCV4, Menevo or Menactra) in addition to one dose of Tdap (Tetanus, diphtheria and pertussis).

Meningococcal meningitis

Meningococcal meningitis is a rare but serious disease that develops rapidly and can claim a life in as little as one day. Of those who survive, approximately one in five are left with serious medical problems like amputation, deafness, and brain damage. Teens are at increased risk of meningococcal meningitis. This increased risk may be due to activities like sharing utensils and kissing.

Tetanus, diphtheria, and pertussis (Tdap)

Tetanus causes painful tightening of the muscles, usually all over your body; diphtheria causes a thick covering in the back of the throat and can also lead to breathing problems, paralysis, heart failure, and even death; pertussis causes coughing spells and can lead to pneumonia, seizures, brain damage, and death, particularly in infants.

Vaccination is the best way to protect someone from getting the disease.

You may obtain these vaccines from your child's health care provider or other community resource. Vaccines are also available at your local health department. See attached flyer for health department open hours.

Students who do not provide documentation of these immunizations to the school this fall are subject to exclusion. If there are medical/religious or philosophical reasons your child cannot receive immunizations, please contact the school clinic for an Immunization Exemption Form.

Thank you,

Kristen L. Chittick, RN
District RN Supervisor for Stow-Munroe Falls City Schools
Akron Children's Hospital, School Health Services
